

Unity Android SDK Integration Guide

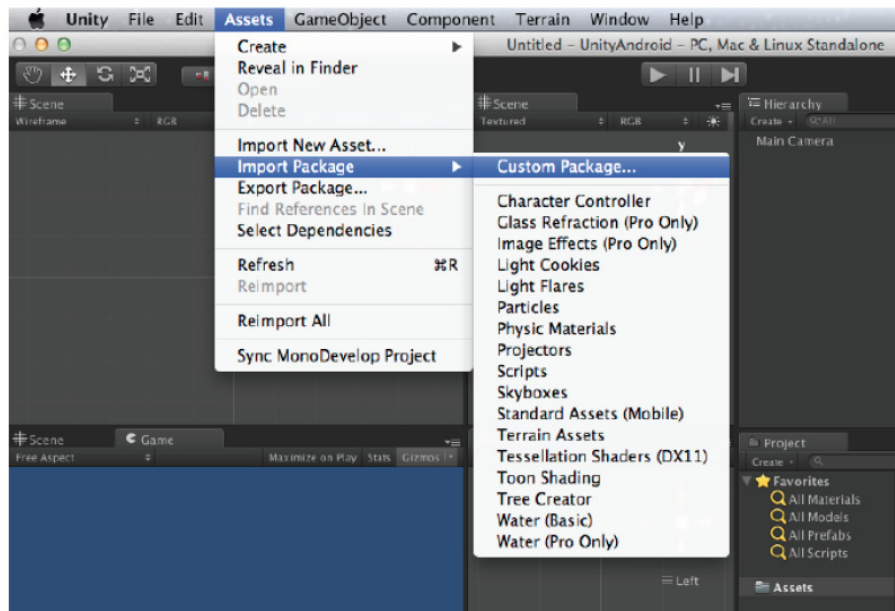

This document details the process of integrating the Beachfront .iO Ad SDK with your Unity Android Application.

Requirements

1. Beachfront .iO app ID & Ad Unit ID - [Get it from here.](#)
2. Beachfront Unity SDK - [Get it from here.](#)
3. Android 1.5 and above

Installation

1. Access the Beachfront .iO console and register your application to get your App ID & Ad unit Id. Download the Beachfront Unity SDK & import the Beachfront Unity SDK to your Unity project as a custom package. (See image.)

2. Add BF activity in the application node of AndroidManifest.xml:

```
<activity android:name="com.bfio.ad.BFIOActivity"  
android:configChanges="keyboardHidden|orientation|screenSize" />
```

Make sure to have android:targetSdkVersion should be equal or greater then 13 in the manifest.

```
<uses-sdk android:targetSdkVersion="13" />
```

Add following required permissions in your AndroidManifest.xml

```
<uses-permission android:name="android.permission.READ_PHONE_STATE"/>  
<uses-permission android:name="android.permission.INTERNET"/>  
<uses-permission android:name="android.permission.ACCESS_NETWORK_STATE" />
```

Once you've completed the above steps, you can start displaying ads in your application by following the simple instructions for Interstitial Ad below: In your Game Object C# script (the one from which you want to show the ad), implement the AdListener interface. This will register the Ad events with your game object.

```
public class Demo : MonoBehaviour, AdListener
```

Declare an instance variable of UnityBFIO type.

```
UnityBFIO unityBFIO;
```

Instantiate the Unity BFIO variable in the start method with the APP ID & Add Unity ID

```
unityBFIO = UnityBFIO.GetInstance (appId,adUnitID, this);
```

Request Ad:

```
unityBFIO.requestAD(appID,adUnitID);
```

Show Ad:

```
unityBFIO.showAD();
```

The sample Unity Game Object class integrated with Beachfront .iO:

```
using UnityEngine;  
using System;  
using System.Collections;
```

```

public class Demo : MonoBehaviour, AdListener {

    private GUIStyle labelStyle = new GUIStyle();

    private float centerX = Screen.width / 2;
    UnityBFIO unityBFIO;
    String appID = "e04fd6b0-4eb2-4dc8-b8d3-accfb7cf8043";
    String adUnitID = "622834c9-3b52-4114-a531-a4bf494230ba";

    // Use this for initialization
    void Start ()
    {
        labelStyle.fontSize = 24;
        labelStyle.normal.textColor = Color.black;
        labelStyle.alignment = TextAnchor.MiddleCenter;
        unityBFIO = UnityBFIO.getInstance (appID,adUnitID, this);
    }

    void OnGUI ()
    {
        GUI.Label(new Rect(centerX -200, 20, 400, 35), "BFIOSDK Demo",
        labelStyle);
        if (GUI.Button(new Rect(centerX - 75, 80, 150, 35), "Request Ad"))
        {
            unityBFIO.requestAD(appID,adUnitID);
        }
        if (GUI.Button(new Rect(centerX - 75, 180, 150, 35), "Show Ad"))
        {
            unityBFIO.showAD();
        }
    }

    public void onInterstitialFailed(string args){
    }

    public void onInterstitialStarted(string args){
    }
    public void onInterstitialClicked(string args){
    }
    public void onInterstitialDismissed(string args){
    }
    public void onInterstitialCompleted(string args){
    }
    public void onReceiveInterstitial(string args){
        unityBFIO.showAD();
    }
}

```
